The nucleotide sequence of this BAC clone was generated by compining Monsanto and Rep-Japan sequencing data.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are perseated as runs of N. The order of the pieces is believed to be correct as given, The order of the pieces is believed to be correct as given, nowever the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are peptesented as runs of N. The order of the pieces is believed to.be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a "working draft' sequence.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of 1 configs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

On Jul 12, 2002 this sequence version replaced gi:17026098

Genes were predicted from the integrated results of the following: GENSCANI.0, ELASTRY.0, BLASTRY.0 as well as SplicePredictor (October 1998 version). The genomic sequence was searched against NCEN NonRedundant Protein database. In recognize the following: GENSCANI.0, Labrath.000-138-7403 and the CDNA sequence database at RGP. Protein homologies of the coding regions were searched against the identified cDNA sequences using BLASTR.0.0 with the corresponding DDBJ accession no. and RGP Clone ID.

A gene with identity or significant homology to a protein is classified as an annew, putative- and "like protein." A gene without significant homology to any protein but with BST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted with a gene prediction program is classified as a 'hypothetical' protein.

The orienterion of the sequence of Blillill clone has an overlap with B1080D07 (DDBJ:AF003203) at the position 146,696 to 152,835 of 3' end. Detailed information of verlap and assembly quality together with the procession of this entry is available at hittp://rgp.dna.affrc.go.jp/GenomeSeq.html.

Agrobiological Sciences, Race Genome Research Program; Kannondai 2-1-2, Tsukuba, Ibaraki 305-8602, Japan (E-mail:Eseaskiénisas afrec go.jp, WEListtp://rgp.dna.affrc.go.jp, Pramail:Eseaskiénisas afrec go.jp, WEListtp://rgp.dna.affrc.go.jp/, Tel.81-298-38-7469)

The nucleotide sequence of this BAC clone was generated by combining Morsanic and RGP-Japan sequencing data.

WOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the gaps between them to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* This sequence will be replaced

* WOTE: This is a "working draft' sequence.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* This sequence will be replaced as soon as it is available and the accession number will be preserved.

* The accession number will be preserved.

The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

The accession number will be preserved.

                                                                                                                                                                                                                                                                                              ij
                                                                                               Also described is a marker for detection polymorphisms in plant genomes. The constructed marker can be used for detecting plant genome polymorphisms, which is useful particularly in studying restriction fragment length polymorphism applicable in cell genetics e.g. for analysing and selecting specific breeds of plants. The method is simple, easy, less time consuming and not so laborious, e.g. in the study of less frequently occurring polymorphism between various species to enable identification of the site and isolation of the required gene.

ABLA9926 to ABLS0036 represent nucleotide sequences used in the exemplification of the present invention.
                                                           detecting polymorphisms in a plant genome. The method comprises the production of a primer for nucleic acid amplification by using the base sequences of a transposable element and/or the domain adjacent to it.
                                                 present invention describes a method for constructing a marker for

detecting polymorphisms in a plant genome. The method comprises the production of a primer for nucleic acid amplification by using the base sequences of a transposable element and/or the domain adjacent to it. Also described is a marker for detection polymorphisms in plant genomes. The constructed marker can be used for detecting plant genome polymorphisms, which is useful particularly in studying restriction fragment length polymorphism applicable in cell genetics e.g. for analysing and selecting specific breeds of plants. The method is simple, easy, less time consuming and not so laborious, e.g. in the study of less frequently occurring polymorphism between various species to enable dientification of the site and isolation of the required gene.

ABLA9926 to ABL50036 represent nucleotide sequences used in the
Construction of marker for detecting plant genome polymorphism with use of transposable element, useful particularly in studying restriction fragment length polymorphism applicable in cell genetics
                                                                                                                                                    The present invention describes a method for constructing a marker for

The present invention describes a method for constructing a marker for detecting polymorphisms in a plant genome. The method comprises the production of a primer for nucleic acid amplification by using the base sequences of a transposable element and/or the domain adjacent to it.

Also described is a marker for detection polymorphisms in plant genomes. The constructed marker can be used for detecting plant genome.

The constructed marker can be used for detecting plant genome polymorphisms, which is useful particularly in studying restriction fragment length polymorphism applicable in cell genetics e.g. for madysing and selecting specific breeds of plants: The method is simple, easy, less time consuming and not so laborious, e.g. in the study of less frequently occurring polymorphism between various species to enable the dentification of the site and isolation of the required gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes a disease resistance protein of rice variety rsuyuake. The rice Pi-ta gene was cloned by a map-based cloning strategy. The Pi-ta protein has a novel structure, compared to all known classes of resistance gene products. The polynucleotide sequence confers a Pi-ta resistance gene-mediated defence response against diseases caused by fungal pathogens, particularly the rice blast fungus. Introduction of the cloned Pi-ta gene into susceptible rice confers resistance to pathogen strains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2.7%; Score 137.4; DB 21; Length 5113; 85.5%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes a disease resistance protein of rice variety Yashiro-mochi. The rice Pi-ta gene was cloned by a map-based cloning strategy. The Pi-ta protein has a novel structure, compared to all known classes of resistance gene products. The polynucleotide sequence confers a Pi-ta resistance gene-mediated defence response against diseases caused by fungal parhogens, particularly the rice blast fungus. Introduction of the cloned Pi-ta gene into susceptible rice confers resistance to pathogen strains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2; Gaps

The invention relates to an Arabidopsis thaliana nucleic acid (I)

Comprising a sequence capable of hybridising under stringent conditions
to a sequence sclerced from any one 0 599 sequences (ABN98123-ABN99231),
given in the specification or its fragment. A polypeptide (II) encoded by
given in the specification or its fragment. A polypeptide (II) encoded by
(I), a transgenic plant (III) comprising an exogenous nucleic acid or a
genetically modified cell (IV) comprising an exogenous nucleic acid or a
genetically modified cell (IV) comprising an exogenous nucleic acid or a
useful in identifying homologous or related genes, in producing
compositions that modulate the expression or function of its encoded
protein, mapping functional regions of the protein and in studying
associated physiological pathways. (I) is also useful in
screening assays of various plant strains to determine the strains that
stress. (II) and (III) are useful for screening of biologically active
are best capable of withstanding a particular disease or environmental
stress. (II) and (III) are useful for screening of biologically active
gents, e.g. fungicides, inserticides, etc., for elucidating biochemical
crops to prevent or treat disease. (II) are also useful in screening
programs to identify agents that minto or enhance the action of tolerance
factors. Such agents are useful in improved methods of treating
characteristics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      chhance their tolerance to environmental stress. (I) is also useful confidential production of a biosynthetic product in a plant. (III) is useful for identifying other mediators that may induce expression of proteins of interest, for setablishing the extent to which any specific insect and/or pathogen is responsible for damage to a particular plant, for identifying other mediators that enhance or induce tolerance to environmental stress, for identifying factors involved in the insert productions of nutritional, commercial, or medicinal value and for identifying productions of nutritional, commercial or medicinal value. (IV) is useful in the study of genetic function and regulation, or alteration of the cellular metabolism and for screening compounds that may affect the biological function of the gene or gene products. (Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format gart of the printed specification, but was obtained in electronic format and regulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1422
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1476

AAA/9263 to AAA/9736 and AAB25100 to AAB25570 represent polynucleotide and protein sequences isolated from encalyptus (Bucalyptus grandis) or pine (Pinus radiata also known as Monterey pine). The protein sequences are involved in cell signalling. The polynucleotide and protein sequences can be used to modify the response of plant cells to external signals e.g. environmental changes or pathogens during the growth and development of a plant. They can be used to modify cell proliferation, differentiation, elongation and survival, resistance to disease and nutrient metabolism. Examples of modifications which can be produced are altered fruit ripening and senescence of leaves and flowers e.g. to delay senescence and prolong the life of cut flowers or enhance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   senescence of reproductive organs to engineer sterile plants. Other modifications can be used to delay senescence in selected cell types or organs providing fruit and vegetables which have a longer shelf life between harvest and consumption, or to decrease branching frequency in forest tree species giving long stretches of valuable knot-free clear wood which can be used in solid timber furniture and veneers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated polynucleotide encoding a polypeptide involved in cell signaling used for generating transgenic plants with modified responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eucalyptus grandis; Pinus radiata; Monterey Pine; Plant; modification; Plant cell signalling; modulation; transgenic plant; pathogen; growth; environmental change; development; cell proliferation; differentiation; elongation; survival; disease resistance; nutrient metabolism; ss.

```
The invention relates to an isolated hypoxia inducible promoter (HIP) obtained from the pyruvate decarboxylase (PDC) gene in rice. The HIP can be used for regulating the expression of foreign genes in cells such that the genes are expressed upon exposure of the cells to anaerobic conditions. The HIP can be used to produce transgenic plants that are more tolerant to fanaerobic conditions, e.g. flooding. The HIP can also be used to enhance the expression of gene products that are normally induced under hypoxia conditions. The promoter can be operably linked to genes that express a protein product that is effective against solid tumours sequence obtained from rice pdc2 gene.
                                                                                                                                                                                                                                                                                                                          4441 ACTATATATTTGTAGCCAGCTACAGCACGCACTCAAAGACGTAATGTGTGTATATGACAA 4500

ä
be used for regulating the expression of foreign genes in rice. The HIP can be used for regulating the expression of foreign genes in cells such that the genes are expressed upon exposure of the cells to anaerobic conditions. The HIP can be used to produce transgenic plants that are more tolerant of anaerobic conditions, e.g. ifooding. The HIP can also be used to enhance the expression of gene products that are normally induced under hypoxia conditions. The promoter can be operably linked to genes that express a protein product that is effective against solid tumours pdc2 gene sequence.

The invention relates to a polynucleotide isolated from chromosome 11 of Indica rice cultivar CO39, flanked by marker R2316 and RG1094 comprising one or more genes that confer resistance to strains of Magnaporthe grisea having avirulence gene ANEL-CO39. The Pi-CO39(t) polynucleotides are useful for conferring or improving resistance of plants to strains of the rice blast pathogen, Magnaporthe grisea and other pathogens. The Pi-CO39(t) nucleic acids may be used as probes to detect the presence of and/or expression of Pi-CO39(t) genes, and to produce large quantities of pure Pi-CO39(t) proteins. Purified gene products of Pi-CO39(t) are useful in producing polyclonal or monoclonal antibodies useful as sensitive detection reagents for the presence and accumulation of Pi-CO39(t).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ς,

The transgenic plants are useful for plant breeding or directly in agricultural or horticultural applications. The present sequence is rice R6A38 contig. 26Nippon DNA. This sequence comprises portion of BAC clone 82N2O from Nipponbare, containing R6A38 sequence well as obes buss and NBR6.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FEATURES

                                                                                                                                                                                                                                                                                                                                                                                                           for 48 hr. The tissue, total RNA, and poly(A) RNA were prepared, a cDNA library was made, and the cDNA clones were in vivo excised to give platescript phagemids in the TJ Close lab (Choi. Close, Fenton) at the University of California, Riverside. Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors).

plueScript backbone); Site_1: BamHI; Site_2: BglII; RescueMu (engineered from pBlueScript backbone); Site_1: BamHI; Site_2: BglII; RescueMu is a 4.9 kb, modified maize Mu transposon RescueMu tansposon Resigned to allow plasmid rescue from total genomic DNA. Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site 'www.zmdb.iastate.edu' and follow the links for 'RescueMu,' Grid G was grown at Stanford in 2000. DNA was extracted from leaf punches, double digsated using BamHI and BglII; and ligated to form circular plasmids. DNIOB cells were transformed and then screened on LB plates with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EST 22-OCT-2001
                                                                                                                                                         Sequence was trimmed at very probable ligation site. Post-ligation sequence submitted separately. Plate: 1006008 \ row: 3

Five-day old seedling shoots were then harvested, total RNA was prepared, polyfich RNA was purfited, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(·) cDNA phagemids. These steps were performed in the TV Close laboratory at the University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemson University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemson University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and preparations. DNA sequence and wing). Plasmid DNA preparations, DNA sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see hittp://www.genome.clemson.edu/projects/rarley. To order this clone see http://www.genome.clemson.edu/projects/rarley.                                                                                                              and subtropies, rely on rice as their primary source of carbohydrate. Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 431 Mpp (Arumuganatha and Barle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, Nipponbare variety The 11brary contains 36,864 clones with an average insert size of 2185 Kb providing 10.9 haphoid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Two high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AU097543 Rice shoot Oryza sativa (japonica cultivar-group) cDNA clone S6064, mRNA sequence.

RescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA.
Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the site www.zmdb.lastate.edu and follow the links for "RescueMu." Grid I was grown at Barkeley in 2001. DNA was extracted from leaf punches, double digested using BamHI and BglII, and ligated to form circular plasmids. DH10B cells were "ransformed and then screened on IB plates with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    \delta Y
Anote="Vector: pBluescript SK(-); Site_1: EcoRI; Site_2: ANOI; Plants were grown at Washington State University, Pullman, WA in a greenhouse, the rachises were excised and frozen in liquid nitrogen (Kleinhofs lab). In the TJ Close was prepared, poly(A) was purified, one primary unamplified cohal library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Chin). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and equence analysis were set formed at Cugi sequence and analysis were performed at Cugi whore. For more details on library preparation and equence analysis see
